Alan Wofsy Site  
3840 Finley Avenue  
Santa Rosa, CA  
Case No. 1TSO379

**Notice of Proposed Corrective Action Plan (CAP) Approval:**

Comment Period ends: March 11, 2005

**Problem Description:**

Soil and groundwater are contaminated by petroleum hydrocarbons that leaked from seven underground storage tanks formerly located at 3840 Finley Avenue, Santa Rosa. Petroleum hydrocarbons measured as diesel have been detected in groundwater as high as 1,900 µg/l (parts per billion). A sensitive receptor survey indicates that domestic water supply wells exist in the area.

**Interim Actions Completed:**

The seven separate former underground storage tanks and some impacted soil were removed in May 1990. Eight groundwater-monitoring wells and 35 soil borings have defined the extent of impacts to soil and groundwater.

**Proposed Action:**

The CAP proposes to excavate and remove additional petroleum-contaminated soil to complete the cleanup of the remaining soil and groundwater contamination at the site.

**The proposed corrective action will be approved without further notice unless significant public comment is received prior to March 11, 2005. Please submit your written comments to:**
